## PROFILE

Senior Frontend Engineer with 8+ years of experience building **accessible, high-traffic web applications** with Vue.js, TypeScript, and JavaScript. Experienced in **frontend architecture, accessibility, and technical leadership** across customer portals, B2B e-commerce, and healthcare platforms. Hands-on, pragmatic engineer with a focus on **maintainable software and solving complex frontend problems**.

## CORE SKILLS

|                            |                                                                                                                                               |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| Frontend                   | JavaScript (ESNext) · TypeScript · Vue.js · React · Nuxt.js · HTML5 · CSS3/SCSS                                                               |
| Architecture & APIs        | Frontend Architecture · SSR · Server-driven UI · Component-driven Development · REST API · Microfrontends                                     |
| Accessibility & Testing    | WCAG 2.1/2.2 · ARIA · Semantic HTML · Keyboard Navigation · Vitest · Vue Test Utils · Unit Testing · Component Testing · Storybook · Histoire |
| DevOps & Development Tools | Azure · Azure Application Insights · Azure DevOps · Bitbucket Pipelines · Git · Claude · GitHub Copilot · JetBrains AI Assistant              |

## EXPERIENCE

### Frontend Engineer / Frontend Dev Lead

Apr 2023 – Sep 2026

Nearshore Portugal · Lisbon, Portugal

Led international engineering team developing high-traffic (6.5 mil users) customer self-service portals for EnBW and Yello, contributing to the architecture, development, delivery, and continuous improvement of customer-facing digital services.

- Designed and delivered **server-side rendered (SSR) applications** focusing on accessibility, web performance, scalability, and maintainability using **Vue.js + Express.js + Vite, TypeScript, and Pinia**.
- Engineered the frontend architecture** for a configurable **relocation service** supporting **dynamic workflows, reusable services, and headless CMS-managed content**, enabling the platform to evolve with changing business requirements. The service has supported approximately **14,000 relocations** and contributed to an **almost 20% reduction in relocation-related hotline and email contacts** between 2025 and 2026.
- Expanded the existing **server-driven UI platform** by engineering an approach for advanced validation and complex customer journeys, enabling the delivery of **5+ complex services** that were previously not possible within the platform.
- Maintained and improved **Azure DevOps YAML pipelines**, including CI/CD workflows, build configurations, environment variables, and deployment processes; cleaned up obsolete configuration to improve pipeline maintainability during the npm-to-pnpm migration.
- Managed **application releases across environments** and authored release process documentation, establishing consistent and repeatable deployment procedures; monitored production applications through **Azure Application Insights**, investigating telemetry and diagnosing production issues.
- Led and successfully delivered accessibility improvements across multiple customer-facing applications, helping prepare products for the **European Accessibility Act (EAA)** while promoting **semantic HTML, WCAG-aligned practices**, and inclusive engineering standards.
- Promoted to **Frontend Dev Lead**, combining hands-on development with mentoring, code reviews, technical interviews, architectural guidance, and collaboration with Product Owners and Business Analysts to translate business requirements into practical technical solutions. Delivered 4-sprint onboarding and evaluation process.

### Frontend Consultant

Jan 2023 – May 2024

Institut biostatistiky a analýz · Brno, Czechia

Joined a healthcare software provider to modernize a business-critical patient management platform used by medical professionals.

- Migrated heavy web forms from Knockout.js to Vue.js within the existing Twig-based architecture, replacing direct DOM manipulation with reactive, component-based UI and **reducing UI interaction latency by ~40%**, measured through Chrome Performance profiling.
- Personally migrated the application from **JavaScript to TypeScript**, resolving type inconsistencies and uncovering potential defects while improving code quality, reliability, and maintainability.

- Produced **technical documentation** and established implementation guidelines to support consistent development practices and facilitate knowledge sharing across the engineering team.

## Frontend Developer

Jul 2019 – Nov 2021

**Conrad Electronic Linz GmbH | ACTUM Digital** · Prague, Czech Republic

- Joined the **Conrad Electronic B2B e-commerce** account through ACTUM Digital as a Vue specialist, quickly ramping up on **React + Redux**, and delivering features across **8 country storefronts** with diverse legal, accessibility, and market requirements.
- Formed a new **2-person frontend team** with another new hire after the previous team transitioned out; independently onboarded to the codebase with scarce documentation and drove modernization including the **React 15.6 → 16.8 migration**, **React Hooks** adoption, and replacement of a fragile custom form solution with **Formik**.
- Drove **accessibility and usability improvements** across legacy React components, introducing semantic HTML, ARIA patterns, and keyboard navigation to improve accessibility and consistency across the e-commerce platform.
- Continued with the in-house team after 1 year, helping drive the e-commerce platform rollout across **5 additional country storefronts**, extending the platform while maintaining consistency across localized implementations.
- Refactored legacy components using **TypeScript** and a functional, modular approach, built a **Storybook component catalogue**, and took on **team lead and tech lead responsibilities** including 1:1s, frontend meetings, interviews, onboarding, and Scrum ceremonies.

## Frontend Developer

Jun 2018 – Jun 2019; Dec 2021 – Mar 2023

**jPower8** · Prague, Czech Republic

- Owned frontend delivery as the **sole frontend engineer** for an employee-facing **SaaS PWA**, independently translating loosely defined requirements into production-ready features and making the technical decisions required to deliver **2 core services and 3 optional paid add-on services**.
- Co-developed a customer-facing **Vue 2/3 PWA** using **TypeScript, Vuex, Vite, Tailwind CSS** and **i18n**, integrating content from a **headless WordPress CMS via RESTful APIs**.
- Built a **reusable, accessibility-focused component library** adopted across the startup's frontend products, establishing consistent UI patterns and improving **ARIA, semantic HTML, keyboard navigation, and screen reader support** across multiple applications.
- Contributed to the **full redesign of an established web banking portal**, modernizing **all existing pages across two visual skins** from desktop-only to a **mobile-first, fully responsive experience through CSS-only restyling**, without modifying existing HTML markup or functionality.

## Application Developer · Tech Lead

Mar 2015 – Feb 2018

**IBM | Manpower** · Bratislava, Slovakia

- Created and maintained corporate web pages adhering to **W3C, WCAG**, and **internal IBM standards**, with a focus on semantic markup, accessibility, and SEO; **trained** and **mentored** team members and collaborated with technical leads across geographies.
- Acted as **first-level Drupal support** and actively contributed to a **global Drupal migration**, supporting the transition and maintenance of corporate web properties.

## PROJECTS

### Favour Flavours — Artisan Bakery Portfolio & Website

Personal Project, Ongoing

**favourflavours.com** · Full-stack build for a client's bakery business

- Designed and built a **full-stack SSR website end-to-end** using **Nuxt 4, Vue.js**, and a **file-based Node.js backend**, independently owning architecture, implementation, hosting, and deployment.
- Engineered a **multi-theme CSS architecture supporting 8 visual themes** and built a custom **product image upload and metadata management system** for the client's product catalogue.
- Implemented **Bitbucket Pipelines CI/CD** for automated production deployments and established **technical SEO foundations** using SSR (96/100 Lighthouse Performance, 100/100 Accessibility, 100/100 Best Practices, and 100/100 SEO), semantic HTML, metadata, and structured page architecture.

## EDUCATION

**BSc in Computing, IT and Design - The Open University** · UK (Distance Learning) · 2011 - 2016

Completed part-time alongside full-time employment.

## LANGUAGES

**English** Full Professional · **Slovak** Native · **Czech** Full Professional · **Spanish** Beginner
